## Instructions to Authors

### General

1. Authors should submit **three complete copies** (the original and two copies) to the Editor-in-Chief. The original illustration material (original drawings, etc.) and two sets of copies should be submitted together with the manuscript. It is recommended that the authors suggest four to six names, including addresses and specific fields of interest, of possible referees for their paper.

2. Papers will be published in **English**. Because of the interdisciplinary nature of the journal, authors should strive to **avoid technical jargon** and to define specialized terminology.

3. Papers which are ready to go to the printers can be published within a **short period**.

### Preparation of Manuscripts

4. Papers should be **typewritten**, double-spaced on one side of letter size paper preferably not larger than  $8\frac{1}{2}'' \times 11\frac{3}{4}''$  and with a margin 2'' wide on the left. All pages should be numbered serially. References, Tables, footnotes and legends for illustrations should be typed (double-spaced) on separate pages. Manuscripts typed with a dot-matrix printer are not acceptable.

5. The **first page** should contain:

- a) the title
- b) the name(s) of the author(s)
- c) the name of the laboratory where the work was carried out
- d) a running title of not more than 40 characters including spaces
- e) footnotes to the title.

6. Papers should be preceded by a **summary** of not more than 225 words. The summary should be intelligible to the general reader without reference to the text. Abbreviations should be avoided in the summary.

7. The summary should be followed by about 6 **key words** that will identify the subjects under which the article can be indexed.

8. The **bibliography** must refer only to work cited in the text. References must be listed alphabetically at the end of the paper including full titles and with abbreviations according to the Bibliographic Guide for Editors & Authors.

Eigen, G.S. 1960. The kinetics of cation transport. *Proc. R. Soc. London* **138**:182-191

Gibbs, T., Charles, R.T. 1961. Enzymes in membranes. In: *The Molecular Structure of Membranes*. B.A. Selkirk, editor. pp. 53-60. Springer-Verlag, New York

Inclusive pagination, stating first and last page numbers of articles, must be used.

Citations in the text should be given in parentheses; e.g., (Huntley & Briarly, 1967), or (Carson, 1940; Hopkins, 1943), except when the author's name is part of a sentence; e.g., "Harding (1968) reported that . . .". When a paper with more than two authors is cited, all authors are named in the first citation, but subsequently only the first author is named; e.g., (Miller et al., 1963). Another form of citation uses numbers in square brackets referring to an alphabetically ordered bibliography list. Either form is acceptable when used consistently throughout the paper.

9. **Footnotes** should be kept to a minimum and numbered consecutively throughout the paper. Footnotes to the title or authors of the article are to be marked by asterisks and to be placed on the title

page. Footnotes to formulae are to be marked by asterisks, too.

10. **Figures** must be separated from the text and numbered. Original drawings and graphs should be made in India ink on white bristol board. Clean glossy prints of these, shot in sharp focus to final size (50%) are preferred. Figures should be prepared to fit one column (8.1 cm) or, on rare occasions, two columns (16.9 cm), after a reduction to 50%. Lettering, thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas should be large enough so as to be legible after reduction. Final size of letters should be: 2 mm for capital letters and numbers; 1.6 mm for lower case letters. If the size of the lettering is inadequate for reduction to 50%, figures will be returned to the authors, causing considerable delay.

The publisher reserves the right to reduce or enlarge illustrations.

Illustrations requiring reproduction as half-tone plates should be kept to a minimum. Photographs should be clean glossy prints in sharp focus and as rich in contrast as possible. They should be trimmed at precise right angles. Scales should be given.

11. Typewritten **mathematical equations** should be styled so as to avoid misinterpretation by the printer.

All letters contained in formulae as well as single letters in the text are automatically set in italics and therefore require no underlining. Hence, abbreviations that appear in formulae and are to be set in

Roman type (the type normally used for the text) should be specially marked by underlining in yellow, if possible.

It will be helpful to the printer if **Greek characters are underlined in red and Script in green**. Small letters should then be underlined once and capital letters twice; this applies also to Latin letters in formulae (in pencil). Boldface type (heavy type) should be marked by wavy underlining.

Subscripts and superscripts should be clarified by caret and inverted caret marking  $1^2$ ,  $1_2$ ; a subscript to a subscript, by  $1_{23}$ .

Obscure primes and dots must be called to the attention of the printer. Mark very clearly: number 1 and letter *l*; zero and letter, *O*, *o*; *e* and *c*; *e* and *l*; *n*, *u* and *v*; primes and apostrophes. Use fractional exponents instead of root signs and the solidus (/) for fractions wherever their use will save vertical space, exp () notation when the exponent is complicated.

All equations must be numbered sequentially in arabic numerals in parentheses on the right hand side of the page.

12. **Symbols and abbreviations** for units of measurements should follow the CBE Style Manual (5th ed. rev.) (Council of Biology Editors, Inc., 9650 Rockville Pike, Bethesda, MD 20814).

# Significant Research on Current Topics

... From Springer-Verlag Journals

## European Biophysics Journal

In continuation of *Biophysics of Structure and Mechanism*

**Managing Editor:** Peter Bayley, National Institute for Medical Research, London, Great Britain

**Editorial Board:** H. J. C. Berendsen, University of Groningen, The Netherlands; F. Conti, Institute of Cybernetics and Biophysics, Camogli, Italy; R. Rigler, Karolinska Institute, Stockholm, Sweden; E. Sackmann, Technical University, Munich, FRG

The **European Biophysics Journal** presents the latest research findings in a wide range of areas employing the principles of physical science to understand biological structure and function. The journal publishes original research articles, reviews, and short communications which apply a distinctively biophysical approach to all levels of biological organization. Experimental and theoretical studies in the following areas are regularly published: molecular structure and interactions, membrane and receptor biophysics, thermodynamics and energetics of biological processes, and theoretical biophysics.

ISSN: 0175-7571 Title No. 249  
1986, Volume 13 (4 issues): \$180.00

## Journal of Comparative Physiology B

Biochemical, Systemic, and Environmental Physiology

**Editorial Board:** K. Johnsen, Aarhus, Denmark; B. Linzen, Munich, FRG; W. T. W. Potts, Lancaster, Great Britain; R. B. Reeves, Buffalo, New York

Published bimonthly, **Journal of Comparative Physiology B—Biochemical, Systemic, and Environmental Physiology**—publishes articles regarding the "machinery" of animals, from the molecular to the organismic level. The journal explores metabolic regulations, respiration and gas transport, the physiology of body fluids, circulation, temperature regulation, muscular physiology, and the comparative aspects of metabolism and enzymology.

This journal is an essential resource for researchers of invertebrates, vertebrates and nonhuman mammals. In addition the **Journal of Comparative Physiology B** is referred to frequently by researchers of higher mammals—especially humans—as studies of other animals provide insights into the complex processes of higher vertebrates.

ISSN: 0174-1578 Title No. 360  
1986, Volume 156 (6 issues): \$387.00

## European Journal of Biochemistry

Published by Springer-Verlag on behalf of the Federation of European Biochemical Societies

**Managing Editors:** Claude Liébecq (Chairman), Liège, Belgium; Giorgio Bernardi, Paris, France; Lothar Jaenicke, Cologne, FRG; Pierre Jollès, Paris, France; Cees Veeger, Wageningen, The Netherlands

Reporting on the latest research results, the **European Journal of Biochemistry** is one of the most cited journals in the field. For those who must stay abreast of experimental and theoretical developments as they occur, this journal is the definitive source.

Each issue contains articles employing the newest methods applicable to biochemical problems as well as the latest findings in:

- nucleic acid research, protein synthesis, and molecular genetics
- protein chemistry and structure
- enzymology
- carbohydrates, lipids, and other natural products
- physical biochemistry
- membranes and bioenergetics
- cellular biochemistry and metabolism
- developmental biochemistry and immunology

ISSN: 0014-2956 Title No. 225  
1986, Volumes 154–161 (3 issues per volume): \$811.00
